

2002 Product Development Metrics Survey RD&E Resource & Capacity Management Practices

Copyright © 2002 Goldense Group, Inc. All Rights Reserved.

INTRODUCTION

We believe it will be worth your while to complete this Research, Development, & Engineering [RD&E] survey covering the full range of Product Development and to request a copy of the results that will be sent to all survey participants who make an honest effort to complete this survey questionnaire.

The participants in our Biennial Survey receive a forty-plus page results document complete with graphics. Our 1998 and 2000 participants were completely satisfied with the document they received and sent us only accolades for our research work. We will again provide the results to those who credibly complete responses to all questions within our required timeframes. We appreciate your commitment of time and rigorousness in the completion of this survey. We will absolutely keep responses confidential!

COMPLETED SURVEYS ARE DUE BY August 12, 2002. THANK YOU!

A special thank you to the numerous 1998 and 2000 survey participants who emailed GGI after our recent RapidNews announcement and expressed their interest in participating in the 2002 survey. Thank you! GGI will do high quality work this time too!

TABLE OF CONTENTS

This survey covers five areas relating to Capacity Management Practices where there is currently significant industry activity. The sixth section, the first section of the survey, allows us to categorize your response. The results of this survey will be of significant interest to managers and decision makers.

- A. Respondent Profile
- B. Loading The RD&E Capacity Pipeline
- C. Providing Capacity For RD&E Activities
- **D.** Balancing Cross-Functional Resources
- E. Using Systems, Tools, & Metrics To Manage Capacity
- F. RD&E Metrics Used In Industry

SECTION A RESPONDENT PROFILE

The purpose of this section is to correctly categorize your company within the population of companies that respond to this survey. Persons who wish to compare their response to the overall results, usually want to do so with other companies of similar size and type. We are trying to achieve the end result that most people seek. Please do your best to characterize your response. The format for Section A is the exact same format as the 1998 and 2000 GGI surveys which were well received.

Company Name:		which the survey results will be mailed.
Phone:	Fax:	E-Mail:
Would you like a copy of the	ne survey results?	□ Yes or □ No

GI

A2. Is this a \square public or \square private	e company?	
A3. For what type/scope of company or survey? SECTION B

☐ e. Other

LOADING THE RD&E CAPACITY PIPELINE

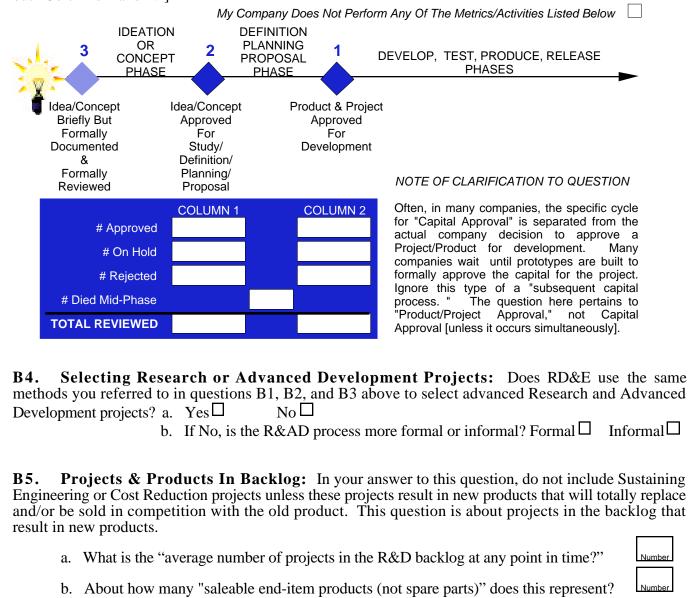

idea/concept/definition/p	cess: How many times does your company review a given roposal before finally making a business decision to either formally approve or RD&E product and/or investment project. [Check One Box Only]
☐ a. 2.5-Step	First a simple short, probably one-page, description of the idea is discussed. Little work has been performed, if any. The idea is in a highly raw state. At this time, it is either killed, tabled, or moved forward for further analysis.
□ b. 2- Step	First a preliminary marketing and technical analysis is reviewed. At this time, it is either killed, tabled, or moved forward for final estimation.
□ c. 1- Step	A single top management meeting is held for a go/no go decision. A complete comprehensive plan/analysis has been prepared for consideration. Work leading up to this meeting has been conducted in functional organizations.
□ d. No-Step	One person/organization determines the R&D products/projects to be done. Or, somehow it happens without any perceiveable process. There is no cross-functional multi-disciplined management team that decides.

B2. Selection Process Decisionmakers & Decisionmaking: How many people are involved in the selection process you referred to in your response to Question B1 above? Limit your response to include the actual decisionmakers only, not everyone consulted during the process. [If you have a "No-Step" or "1-Step Process," fill out only "Column 2" in the box below. If you have a "2-Step or 2.5 Step Process," fill out "Columns 1 and 2."]

 3	IDEATION OR CONCEPT PHASE	2	DEFINITION PLANNING PROPOSAL PHASE	1	DEVELOP,	TEST, PRODI PHASES	UCE, RELEASE	_
Idea/Conce Briefly But Formally Documente & Formally Reviewed	d ed	dea/Concep Approved For Study/ Definition/ Planning/ Proposal		duct & Project Approved For evelopment	ct

	n Process is Meeting	best descri	bed as.					
	Meeting							
Somehow I	Happens							
So	olo Effort							
ι	Jnknown							

B3. Pipeline Loading & Decisionmaking: This question measures "throughput and yield rate" of product selection decisions made during a <u>one-year period</u>. Does your company approve every product/project presented, or do some products/projects not get approved? [If you have a "No-Step" or "1-Step Process," fill out only "Column 2" in the box below. If you have a "2-Step or 2.5 Step Process," fill out "Columns 1 and 2."]

B6. Projects & Products Released Each Year: In your answer to this question, do not include Sustaining Engineering or Cost Reduction projects unless these projects result in new products that will totally replace and/or be sold in competition with the old product. This question is about projects completed that result in new products, not total projects completed.

- a. What is the "average number of projects completed each year?"
- b. About how many "saleable end-item products (not spare parts)" does this represent?

Number

SECTION C PROVIDING CAPACITY FOR RD&E ACTIVITIES

engineering or industrial desig	laborat	tract/Temporary Labor/Services: Does RD&E utilize outside contractors, tory analysis services, engineering prototyping services, process piloting services, ices, packaging design services, drafting, contract programmers, and other outside $Yes \square No \square$
	bc.	If Yes, what % of total capacity is outsourced each year across all services? [Please check one box for Average. Please check two boxes for the Range experienced over good and poor economic environments.]
		Average Range Average Range Less Than 10% □□ 26% - 30% □□ 11% - 15% □□ 31% - 40% □□ 16% - 20% □□ 41% - 50% □□ 20% - 25% □□ 51% - 100% □□
	d. If Y	Yes, what % of all Outside resources perform Sustaining Engineering?
determine the previously/alro	number eady re	Resources To Sustaining Activities: What method does RD&E use to a of resources to allocate to sustaining engineering activities to support products leased for sale? [Check one box for each practice that exists in your company. The single most common practice.]
□□ a.	. Sustai We o	ining engineering, spare parts, service is a profitable revenue producing business. rganize resources around these activities.
□□ ь		st everyone is involved. uct support takes what it takes.
□□ с	Susta	st everyone is involved. ining engineering needs are reviewed periodically. urces are targeted to these activities/projects, equally prioritized to new products.
□□ d	Susta	st everyone is involved. ining engineering needs are reviewed periodically. urces are targeted to these activities/projects, but new products take priority.
□□ е.	. Resou Susta	arces are clearly divided into development and sustaining groups within RD&E. ining activities are performed at significant level outside the sustaining group.
□□ f.		urces are clearly divided into development and sustaining groups within RD&E. ining engineering work remains contained within the sustaining group.
□□ g	. The c	ompany does not sustain products. We outsource sustaining engineering.
□□ h	. The c	ompany does not sustain products after initial bug fixes. We replace them.
□□ i.	Other	:: Write In (Optional):

SECTION D BALANCING CROSS-FUNCTIONAL RESOURCES

Preface to SECTION D: The information requested in this section is necessary to calculate staffing ratios within RD&E and across Cross-Functional Organizations. The questions in this section are designed to remove the burden of calculation from respondents. We are requesting the raw data. While the questions calculate "% of Time New Prod" and "% Sustaining" which is useful unto itself, the purpose is to get at the staffing ratios. Question D1 and D2 must include the raw headcount data in order to compute the Staffing Ratios. Neither the "Internal To RD&E Staffing Ratios" nor the "Cross-Functional To RD&E Staffing Ratios" can be derived without the raw headcount estimates. GGI will not sample the survey population in such a way that individual company responses become determinable.

Instructions to SECTION D: Include outside contractor labor that supplements internal development staff, but not permanently outsourced/purchased activities. Use best estimates for all questions. There is almost no such thing as an "exact" answer for % Time New Prod vs. % Time Sustain Prod. If you normalize the response, treat D1 and D2 as a whole.

D1. RD&E Ratios: For decades, corporate managers have estimated staffing requirements in certain functions using ratios. In mechanical engineering, for example, a popular ratio is the number of draftpersons to the number of engineers. In software development, for example, a popular ratio is the number of developers to the number of V&V/SQA testers. The purpose of this question is to determine average industry staffing ratios between functions involved in RD&E/Product Development.

D2. Cross Functional Ratios: In the early 1990s, in three separate studies, industry-wide surveys were conducted that estimated staffing levels between RD&E and cross-functional organizations that support product development. The purpose of this question is to determine average industry staffing ratios between functions involved in RD&E/Product Development in 2002, and whether those ratios have changed during the past decade.

	e used b	Priority: How many metrics are in the set of metroy R&D Officers to measure and/or steer RD&E as a whole? This question pertains so related product development activities.	
	a.	RD&E does have a clearly defined "set of metrics" that is known by most R&D manage	rs.
		The number of metrics in the set is Number	
	b.	RD&E does not have a clearly defined set, but the number can be derived.	
		I have derived/estimated an answer by adding up the number of metrics reported by s members at company meetings. Therefore, the number of metrics in the company-w "set of metrics" determined by way of my calculation for the purpose of completing survey is:	vide
		Ten or Less Metrics ☐ 101-125 Metrics ☐ 11 - 25 Metrics ☐ 126-150 Metrics ☐ 150-175 Metrics ☐ 150-175 Metrics ☐ 176-200 Metrics ☐ Greater Than 200 Metrics ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐	
	c.	☐ RD&E <i>does not have</i> a clearly defined set, and the number <i>cannot</i> be derived.	
	d.	If you answered either "a" or "b" above, what is the number of capacity managen metrics that are part of the "set".	nen
		The number of metrics in the set is Number	
SECT	ION F	RD&E METRICS USED IN INDUSTRY	
The rewidely 2002 swill ge	sults jude used by urvey we t the bea	sists of one single question. GGI asked this question in both the 1998 and 2000 survemped off the page. It turned out that there are very few metrics that are commonly y R&D organizations. Nearly identical responses appeared both times. The results of vill be contrasted to the 1998 and 2000 findings so first time participants in the 2002 surnefits of all three surveys. Survey participants wishing more information should refer to a issue of CFO Magazine published by The Economist.	and this rve
"in use the top organiz is cons the mea	"," these manage zation co istent fr asures li	h of the following R&D metrics are "in use" at your company?: To qualify metrics should: (1) be measured at least on an annual basis; (2) be visible to <i>all</i> member ement group as active ongoing tools; (3) be stored in a manner that numerous people in ould find them easily; and (4) have some reliability in that the method used to calculate the rom year to year. Please be strict in applying this definition of "in use" when responding isted for your consideration below. [Check All That Apply]	rs o the hen
